COSPLAY GUIDE

CLERIC

The site of the meteor's impact, Ignadon is riven by constant volcanic activity. Thought to be devoid of life, Ignadon was the perfect hiding place for the Clerics to grow in power.

Followers of the god Calaan, the Clerics see the consumption of Elex in any form as a sin. Instead they use Elex to power their machines. Guardians of Magalan's technology, the Clerics put their faith in Calaan, plasma weapons, mechs and the power of industry.

From the ashes shall rise a new Magalan even more advanced than before.

LIGHT IT UP!

ELEX

LEDS

LEDS

There are LEDs all over the costume, which makes the whole armor even more amazing.

Programmable LED stripes work great for that. And for the party people out there - don't forget the special party mode!

JETPACK

JETPACK

Get ready to fly! With the Jetpack, there is no mountain too high, no valley too deep. Offering outstanding exploration possibilities, the Jetpack is also most valuable in combat:

Hover over your opponents and fire rounds at them or dive in a devastating melee attack from the sky. Or it could be the best buddy on the run.

BLASTER // BACK

90 CM

LASER BLASTER

Pew pew~! The Laser Blaster is a ranged weapon with a high damage output typical for the Clerics - and for the Albs as well!

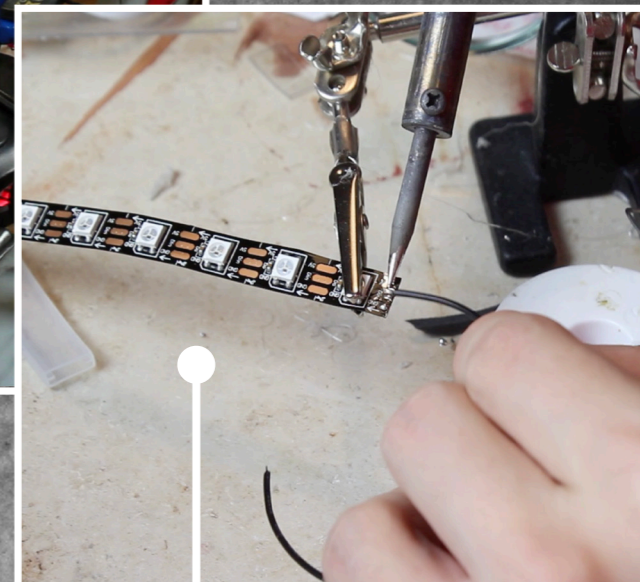

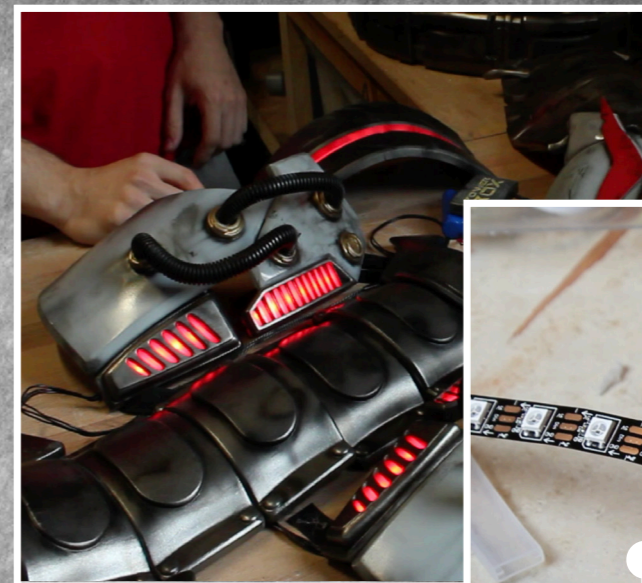

Just imagine you join the Clerics and have to face an Alb with the same gun power - but mostly the Laser Blaster will keep you safe, mostly...

GET IT DONE!

ELEX

SKIRT: WEATHERING

The armor and the fabric part of the high cleric outfit looks super battleworn. You create the post apocalyptic look with acrylic paint, spray paint and different tools like a wire brush or sandpaper to distress the fabric.

SEWING: PATTERN

For the bodysuit you can just buy a pattern, but for all additional elements like the collar you can easily make the pattern by your own.

3D PRINTED ARMOR

There are different ways to build the armor. 3D printing is awesome and super clean. But don't forget all the hours of sanding!

FOAM ARMOR

Foam is cheap and works great for armor. You just need a very sharp cutter and a steady hand.

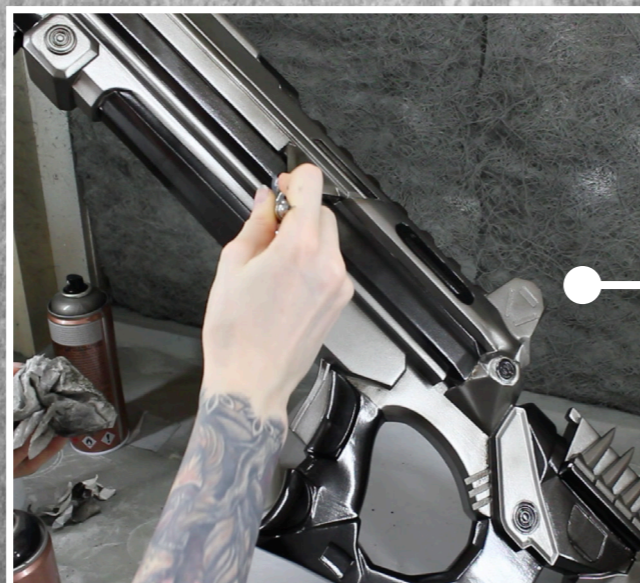

Engravings can be burned in with a soldering iron.

PAINTING

For painting you can use different types of metallic spray paint, and acrylic paint. Also don't forget to give all parts a nice battleworn look.

LEDs

Light up your costume with LED stripes. They are super thin and can be integrated in small armor parts.
